

KCD Gujarat 2026

Website Visual Identity & Design System Guidelines

This document outlines the visual identity system for the Kubernetes Community Days (KCD) Gujarat website. Based on the initial layout designs, these guidelines establish the color palette, typography, UI components, and illustration styles to maintain a cohesive, modern, and culturally resonant digital presence.

1. Color Palette

The website utilizes a contrasting dual-mode palette: warm, approachable light sections for event details and hero banners, transitioning into deep, authoritative dark sections for impact and strong typography.

Warm Cream

HEX: #F6F4ED
Usage: Primary
Light BG

Deep Navy

HEX: #0F172A
Usage: Primary
Dark BG

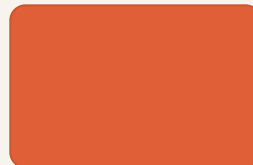

Tech Blue

HEX: #4285F4
Usage: Primary CTA,
Highlight Text

Heritage Green

HEX: #557B3E
Usage: Secondary
Text Accent

Terracotta Orange

HEX: #E05F36
Usage: Gujarati Script,
Accents

Gradients

The hero section incorporates a soft, blurred mesh gradient combining pale yellow, soft orange, and coral/pink behind the text. This gradient should remain subtle and out-of-focus, ensuring it does not overpower the typography or line art.

2. Typography

To reflect a modern tech community while remaining highly readable, the typography relies on clean geometric sans-serifs, paired with a stylized, heavy Gujarati font for cultural headers.

Primary English (Headings)

Recommendation: Montserrat, Poppins, or Plus Jakarta Sans.

Kubernetes Community Day

Usage: H1, H2, large display text. Use bold or extra-bold weights (700-800) with tight letter spacing for maximum impact.

Primary English (Body Copy & UI)

Recommendation: Inter, Roboto, or DM Sans.

A community-driven, CNCF-backed Kubernetes Community Day for the cloud-native community in Ahmedabad, Gujarat. Speaker line-up, schedule, and venue dropping shortly.

Usage: Paragraphs, navigation links, small labels. Use regular to medium weights (400-500).

Primary Regional (Gujarati Script)

Recommendation: Noto Sans Gujarati (Bold/Black) or a custom thick-weight display script.

ગુજરાત

Usage: Section highlights and localized branding. Use warm accent colors (Terracotta Orange) against dark backgrounds to make it pop.

Style	Font Weight	Suggested Size (Desktop)	Line Height
Hero Display (H1)	Bold / 800	64px - 80px	1.1
Section Header (H2)	Bold / 700	48px - 56px	1.2
Body Text	Regular / 400	16px - 18px	1.6
Navigation & Buttons	SemiBold / 600	14px - 16px	1.0 (Caps usually)

3. UI Components & Layout

The website employs pill-shaped elements and rounded styling to feel friendly and modern, contrasting with strict grid layouts.

Buttons & Call-to-Actions (CTAs)

BOOK TICKETSSUBMIT A TALK

- **Primary CTA (Book Tickets):** Solid Tech Blue (#4285F4) background, white text, fully rounded (pill shape). Used for the main action on the page.
- **Secondary CTA (Submit a Talk):** Transparent background with a 1.5px to 2px solid border (Dark Ink on light background, Pure White on dark background), fully rounded.
- **Text Links:** Bold text paired with a right arrow (e.g., "View schedule →").

Tags & Labels

2026

Use thin, bordered pill shapes to enclose metadata like the year ("2026"), session categories, or speaker tags. This frames the information neatly without adding heavy visual weight.

4. Iconography & Illustration Style

Monoline Heritage Illustrations

The visual identity heavily relies on **minimalist, monoline (single line-weight) vector illustrations** of local architecture and monuments (e.g., the Statue of Unity depicted in the hero section).

- **Line Weight:** Maintain a consistent 1.5px or 2px stroke width for all main lines.

- **Color:** Use Dark Ink (#111827) for illustrations on light backgrounds (Warm Cream) and a faded, low-opacity white or grey (e.g., `rgba(255,255,255,0.15)`) for background illustrations on dark sections (Deep Navy).
- **Style:** Flat, geometric, and stripped of unnecessary details. Do not use shading, gradients, or fills inside the line art.

5. Do's and Don'ts

✓ DO

- **Do use high-contrast text:** Ensure typography over gradients or dark backgrounds meets accessibility standards.
- **Do utilize ample white space:** Let the large typography and monoline illustrations breathe.
- **Do use pill shapes consistently:** Apply full border-radius (e.g., 50px) to buttons and tags.
- **Do mix font weights:** Pair thick, heavy headings with clean, light body text for typographic hierarchy.

✗ DON'T

- **Don't over-saturate gradients:** Keep the background mesh gradient soft; it should not distract from the hero text.
- **Don't use drop shadows on text:** Keep the aesthetic flat and modern.
- **Don't clutter illustrations:** Avoid highly detailed or 3D graphics in the website layout; stick to the clean monoline style.
- **Don't mix button styles arbitrarily:** Only use the solid blue button for the primary user action.
